SMARTGUARD™ Products

Temporary Wiring Hooks

Temporary wiring hooks make it easy to hang temporary wiring, cords, cables, and hoses. You can even use them for hanging temporary lighting, safety equipment, clothing and more. These S-shaped hooks can help you meet OSHA safety standards by keeping cords off the ground.

NEW large capacity temporary wiring S Hook also comes in a 90-degree configuration. This allows loop contents to easily change direction. Made from flame rated, impact resistant and non-conductive PVC, these hooks are the easiest way to meet OSHA good housekeeping practices and requirements to keep cords, hoses, cables, temp lighting and fixtures off the ground. Great for your job site wire management or perfect for use on railings, they can be hung from nails or screws at needed wall applications. These hooks have great memory and can be stretched open over 4" pipes and snap right back into their original shape.
